

AMENDMENTS TO THE SPECIFICATION:

Please replace paragraph [0020] with the following amended paragraph.

[0020] Referring now to Figs. 2 and 3, a method of message delivery for an incoming call from a wireless calling party terminal using a wireless communications network to a called party terminal, also referred to as the call-message delivery feature, is shown generally at 100. The method is performed by the MSC 18, or any other suitable one or more processing nodes in the network 10, unless stated otherwise.

Please replace paragraph [0024] with the following amended paragraph.

[0024] Further, it is contemplated that the calling party can subscribe to the call message delivery feature, and therefore enable and disable the feature at their discretion as well. The MSC 18 can determine that the message delivery feature is enable by the calling party by checking the calling party subscriber profile 24 which can store an indicator indicating that the calling party has enabled this feature. The calling party, can subscribe to this feature whether or not they subscribe to call waiting. Further, it is contemplated that the calling party can enable the message delivery feature even though the called party has disabled the feature.
